

Amendments to the Claims

This listing of claims will replace all prior versions, and listings of claims in the application.

1. (original) A method of diagnosing or prognosticating a neurodegenerative disease in a subject, or determining whether a subject is at increased risk of developing said disease, comprising:

determining a level and/or an activity of

- (i) a transcription product of a gene coding for rab31, and/or
- (ii) a translation product of a gene coding for rab31, and/or
- (iii) a fragment, or derivative, or variant of said transcription or translation product,

in a sample from said subject and comparing said level and/or said activity to a reference value representing a known disease or health status, thereby diagnosing or prognosticating said neurodegenerative disease in said subject, or determining whether said subject is at increased risk of developing said neurodegenerative disease.

2. (original) The method according to claim 1 wherein said neurodegenerative disease is Alzheimer's disease.

3. (currently amended) A kit for diagnosing or prognosticating a neurodegenerative disease, ~~in particular Alzheimer's disease~~, in a subject, or determining the propensity or predisposition of a subject to develop such a disease, said kit comprising:

- (a) at least one reagent which is selected from the group consisting of (i) reagents that selectively detect a transcription product of a gene coding

for rab31 and (ii) reagents that selectively detect a translation product of a gene coding for rab31; and

- (b) an instruction for diagnosing or prognosticating a neurodegenerative disease, ~~in particular Alzheimer's disease~~, or determining the propensity or predisposition of a subject to develop such a disease by (i) detecting a level, or an activity, or both said level and said activity, of said transcription product and/or said translation product of a gene coding for rab31, in a sample from said subject; and (ii) diagnosing or prognosticating a neurodegenerative disease, ~~in particular Alzheimer's disease~~, or determining the propensity or predisposition of said subject to develop such a disease, wherein a varied level, or activity, or both said level and said activity, of said transcription product and/or said translation product compared to a reference value representing a known health status; or a level, or activity, or both said level and said activity, of said transcription product and/or said translation product similar or equal to a reference value representing a known disease status indicates a diagnosis or prognosis of a neurodegenerative disease, ~~in particular Alzheimer's disease~~, or an increased propensity or predisposition of developing such a disease.

4. (currently amended) A modulator of an activity and/or of a level of at least one substance which is selected from the group consisting of

- (i) a gene coding for rab31, ~~and/or~~
- (ii) a transcription product of a gene coding for rab31, ~~and/or~~
- (iii) a translation product of a gene coding for rab31, ~~and/or~~ and

- (iv) a fragment, or derivative, or variant of (i) to (iii).

5. (original) A recombinant, non-human animal comprising a non-native gene sequence coding for rab31 or a fragment, or a derivative, or a variant thereof, said animal being obtainable by:

- (i) providing a gene targeting construct comprising said gene sequence and a selectable marker sequence, and
- (ii) introducing said targeting construct into a stem cell of a non-human animal, and
- (iii) introducing said non-human animal stem cell into a non-human embryo, and
- (iv) transplanting said embryo into a pseudopregnant non-human animal, and
- (v) allowing said embryo to develop to term, and
- (vi) identifying a genetically altered non-human animal whose genome comprises a modification of said gene sequence in both alleles, and
- (vii) breeding the genetically altered non-human animal of step (iv) to obtain a genetically altered non-human animal whose genome comprises a modification of said endogenous gene, wherein said disruption results in said non-human animal exhibiting a predisposition to developing symptoms of a neurodegenerative disease or related diseases or disorders.

6. (currently amended) ~~An assay~~ A method for screening for a modulator of neurodegenerative diseases, ~~in particular Alzheimer's disease~~, or related diseases or disorders of one or more substances selected from the group consisting of

- (i) a gene coding for rab31, ~~and/or~~
- (ii) a transcription product of a gene coding for rab31, ~~and/or~~

(iii) a translation product of a gene coding for rab31, ~~and/or~~ and

(iv) a fragment, or derivative, or variant of (i) to (iii),

said method comprising:

(a) contacting a cell with a test compound;

(b) measuring the activity and/or level of one or more substances recited in (i) to (iv);

(c) measuring the activity and/or level of one or more substances recited in (i) to (iv) in a control cell not contacted with said test compound; and

(d) comparing the levels and/or activities of the substance in the cells of step (b) and (c), wherein an alteration in the activity and/or level of substances in the contacted cells indicates that the test compound is a modulator of said diseases or disorders.

7. (currently amended) A method of screening for a modulator of neurodegenerative diseases, ~~in particular Alzheimer's disease~~, or related diseases or disorders of one or more substances selected from the group consisting of

(i) a gene coding for rab31, ~~and/or~~

(ii) a transcription product of a gene coding for rab31, ~~and/or~~

(iii) a translation product of a gene coding for rab31, ~~and/or~~ and

(v) a fragment, or derivative, or variant of (i) to (iii),

said method comprising:

(a) administering a test compound to a test animal which is predisposed to developing or has already developed symptoms of a neurodegenerative disease or related diseases or disorders in respect of the substances recited in (i) to (iv);

- (b) measuring the activity and/or level of one or more substances recited in (i) to (iv);
- (c) measuring the activity and/or level of one or more substances recited in (i) or (iv) in a matched control animal which is predisposed to developing or has already developed symptoms of a neurodegenerative disease or related diseases or disorders in respect to the substances recited in (i) to (iv) and to which animal no such test compound has been administered;
- (d) comparing the activity and/or level of the substance in the animals of step (b) and (c), wherein an alteration in the activity and/or level of substances in the test animal indicates that the test compound is a modulator of said diseases or disorders.

8. (original) The method according to claim 7 wherein said test animal and/or said control animal is a recombinant animal which expresses a gene coding for rab31, or a fragment, or a derivative, or a variant thereof, under the control of a transcriptional control element which is not the native rab31 gene transcriptional control element.

9. (currently amended) An assay for testing a compound, ~~preferably for screening a plurality of compounds~~ to determine the degree of binding of said ~~compounds~~ compound to a rab31 translation product, or to a fragment, or derivative, or variant thereof, said assay comprising the steps of:

- (i) adding a liquid suspension of said rab31 translation product, or a fragment, or derivative, or variant thereof, to a plurality of containers;
- (ii) adding a detectable, ~~in particular a fluorescently~~ labelled compound or a plurality of detectable, ~~in particular fluorescently~~ labelled compounds to be screened for said binding to said plurality of containers;

- (iii) incubating said rab31 translation product, or said fragment, or derivative, or variant thereof, and said detectable, ~~in particular fluorescently~~ labelled compound or ~~fluorescently~~ detectable, labelled compounds;
- (iv) measuring amounts of ~~preferably fluorescence~~ detectable label associated with said rab31 translation product, or with said fragment, or derivative, or variant thereof; and
- (v) determining the degree of binding by one or more of said compounds to said rab31 translation product, or said fragment, or derivative, or variant thereof.

10. (currently amended) The method of claim 1, comprising determining a level and/or an activity of a [[A]] protein molecule shown in SEQ ID NO. 1, or a fragment, or derivative, or variant thereof, ~~for use as a diagnostic target for detecting a neurodegenerative disease, preferably Alzheimer's disease.~~

11. (currently amended) The method of claim 6, wherein said screening is for a modulator of the activity and/or level of a [[A]] protein molecule shown in SEQ ID NO. 1, or a fragment, or derivative, or variant thereof, ~~for use as a screening target for reagents or compounds~~ and wherein said modulator is a reagent or compound for preventing, or treating, or ameliorating a neurodegenerative disease, ~~preferably Alzheimer's disease.~~

12. (currently amended) Use of A method of detecting a pathological state of a cell in a sample from a subject, comprising immunocytochemical staining of said cell with an antibody specifically immunoreactive with an immunogen, wherein said immunogen is a translation product of a gene coding for rab31, SEQ ID NO. 1, or a fragment, or derivative, or variant thereof, ~~for detecting a pathological state of a cell in a~~

~~sample from a subject, comprising immunocytochemical staining of said cell with said antibody,~~ wherein an altered degree of staining, or an altered staining pattern in said cell compared to a cell representing a known health status indicates a pathological state of said cell.

13. (new) The kit of claim 3, wherein said neurodegenerative disease is Alzheimer's disease.

14. (new) The method of claim 6, wherein said neurodegenerative disease is Alzheimer's disease.

15. (new) The method of claim 7, wherein said neurodegenerative disease is Alzheimer's disease.

16. (new) The assay of claim 9, wherein said assay is for screening a plurality of compounds to determine the degree of binding of said compounds to a rab31 translation product, or to a fragment, or derivative, or variant thereof.

17. (new) The assay of claim 9, wherein the detectable, labelled compound is a fluorescently labelled compound.

18. (new) The assay of claim 9, wherein the detectable label is fluorescence.

19. (new) The method of claim 10, wherein the neurodegenerative disease is Alzheimer's disease.

20. (new) The method of claim 11, wherein the neurodegenerative disease is Alzheimer's disease.

21. (new) The method of claim 7, wherein said screening is for a modulator of the activity and/or level of a protein molecule shown in SEQ ID NO. 1, or a fragment, or derivative, or variant thereof, and wherein said modulator is a reagent or compound for preventing, or treating, or ameliorating a neurodegenerative disease.

22. (new) The method of claim 21, wherein the neurodegenerative disease is Alzheimer's disease.

23. (new) The assay of claim 9, wherein said assay is for testing a compound to determine the degree of binding of said compound to a protein molecule shown in SEQ ID NO. 1, or a fragment, or derivative, or variant thereof, wherein said compound is for preventing, or treating, or ameliorating a neurodegenerative disease.

24. (new) The assay of claim 23, wherein the neurodegenerative disease is Alzheimer's disease.
